Misc 32

THIS series of INDIAN NOTES AND MONOGRAPHS is devoted primarily to the publication of the results of studies by members of the staff of the Museum of the American Indian, Heye Foundation, and is uniform with HISPANIC NOTES AND MONOGRAPHS, published by the Hispanic Society of America, with which organization this Museum is in cordial coöperation.

Only the first ten volumes of INDIAN NOTES AND MONOGRAPHS are numbered. The unnumbered parts may readily be determined by consulting the List of Publications issued as one of the series.

INDIAN NOTES

THE WEST INDIES

NATIVE POPULATION

THE Indians of the Antilles possess an especial if melancholy interest in view of the fact that they were the first of the American aborigines to meet the white invader from overseas, and the first to lose their lands and to suffer virtual extermination at his hands. Columbus, and the early explorers following in his wake, found the Bahamas and the Greater Antilles (Cuba, Haiti, Porto Rico, and Jamaica) inhabited for the larger part by a number of peaceable agricultural tribes speaking similar dialects of the Arawak language, now grouped by students under the name of *Taino*. In the large islands of Cuba and Haiti were also found a very primitive group of Indians, in Cuba called *Ciboney*, which, although apparently at one period occupying large

INDIAN NOTES

6	GUIDE
	areas—the whole of Cuba, for instance,—by the time of the discovery survived only in certain isolated districts. These savages lived largely in caves, subsisting on natural products, without knowledge of agriculture, and were able to manufacture objects of only the simplest and crudest kinds. The Lesser Antilles were found to be occupied by a third group, the <i>Carib</i>, a fierce and bloodthirsty people whose continual piratical raids and notorious cannibalism struck terror to the hearts of their more peaceable neighbors. In spite of this, they seem to have practised agriculture, and were nearly as far advanced in the arts as the Taino tribes. The origin of the Ciboney, apparently the earliest inhabitants of Cuba, Haiti (Santo Domingo), and perhaps of other islands, is lost in the mists of the past. As yet there is no evidence to connect them with the tribes of North, Central, or South America. We have every reason for believing, however, that both the Arawak and the Carib migrated to the islands from South America, where many tribes speaking related dialects
	INDIAN NOTES

DISTRIBUTION OF ABORIGINAL CULTURES IN THE WEST INDIES (ABOUT 1492)

are still found. The Arawak evidently left South America first, and gradually spread northward and westward, first through the Lesser Antilles, then the Greater, displacing the earlier inhabitants where such existed, and confining them to limited areas, as in Cuba. In the Greater Antilles they developed the culture we know as Taino; then a wave of Carib migration started from South America and spread through the Lesser Antilles. The Carib seem to have exterminated the Arawak bodily on some of these islands, while on others they killed the men and captured the women. When the caravels of Columbus first sighted the New World, the Carib had occupied all of the Lesser Antilles and were already raiding Porto Rico and Haiti, while the Taino were fast overrunning Cuba, driving the Ciboney to the western tip of the island and to the outlying keys.

The remains of the Taino-Arawak and of the Ciboney have been studied and their principal characteristics established; which has not, unfortunately, been done with any degree of completeness for the Carib.

However, archeology reveals the presence of three great cultures, and only three, and Columbus and his successors found three kinds of Indians inhabiting the West Indies. Now, two of the archeological cultures have already been identified as belonging to two of the groups, the Taino and the Ciboney, respectively, so we can not go far wrong in attributing the third culture to the third group, the Carib, especially as the distribution of that culture in the Antilles corresponds exactly with the Carib habitat as described by the early explorers. Indeed the results of archeological research in all the West Indies, so far as it has progressed, bear out to a remarkable degree our historical knowledge of the distribution of the peoples in the region. Thus in Cuba we find abundant remains of the Ciboney and the Taino, while relics of the culture attributed to the Carib are rare indeed; the Bahamas, Haiti (or Santo Domingo), and Jamaica have yielded many Taino specimens, and a few of Carib origin, while future examination may reveal the crude remains of the Ciboney, whose

presence in Haiti is suggested by historical evidence. Porto Rico yields mainly Taino artifacts, but Carib traces are fairly abundant; and the Lesser Antilles yield both Arawak and Carib objects—sometimes one, sometimes the other predominating, but mainly the latter. Much more information will be found in "Cuba Before Columbus," published by the Museum.

THE TAINO TRIBES

THE term *Taino* has been adopted by archeologists as a general designation for the Arawak tribes of the Greater Antilles which had developed a peculiar culture of their own. The name is derived from their own language, and means "good or peaceable men," as contrasted with the warlike and cannibalistic Carib. They made their living largely by raising corn or maize, cassava, and other native plants, and by fishing; but hunting, on account of the scarcity and the small size of most of the land animals, did not attain great importance. Most of their fishing was accomplished with nets, while clubs, or

macanas, and javelins were the favorite weapons for hunting and for war. The bow and arrow, though existing in some localities, seem to have been little used by these people. The canoes which furnished them transportation were dug out from single logs and were often well made and large. These were propelled with pointed paddles.

Their houses were circular or square in groundplan, neatly made of poles thatched with palm-leaves and walled with thin sheets of bark-like material from certain palm trees; their beds were hammocks slung from the rafters. Very characteristic were the stools or seats of wood, known as *duhos*, often beautifully carved in human or animal form and inlaid with shell, and their handsomely decorated food vessels of wood and of pottery. The boiling of food was done in earthen pots set directly over the fire, and baskets of various forms and sizes, hung from the rafters, contained surplus provisions, trinkets, and the like.

Peculiar graters made by driving innumerable bits of flint or other hard stone

into the surface of a slab of wood were used for grating cassava-root into meal, while for squeezing out the poisonous juices from the grated root to fit it for human food a basket press was employed. Both grater and press are still used by the related tribes in South America, while the presses are still remembered by surviving Cuban Indians, who have employed also the ancient type of grater until recently. After grating and pressing, the meal was made into thin loaves or cakes and baked on a flat circular griddle, made of pottery or stone, fragments of which are still abundant on the sites of the ancient villages.

For wood-cutting and similar purposes these tribes used hatchet-blades or "celts" of stone, some of them, especially the petaloid type, of unusual beauty in form and finish, mounted in club-like wooden handles; while fine cutting and carving of wood, bone, and shell were accomplished with knives, scrapers, and crude drills, rudely made from flakes of flint, their knowledge

of flint-working falling far behind that of other arts. Gritty stones were used for smoothing the work when finished.

Clothing was little used, both men and women going practically naked but for tiny apron-like garments, such as are still worn by their relatives in South America; but a profusion of ornaments was employed, including beads and pendants of stone, shell, and bone, and circular earplugs of shell. Doubtless suitable seeds and nuts, and the feathers of tropical birds of brilliant plumage were also widely employed as personal ornaments, as in South America.

The esthetic sense of the Taino was best expressed in their carvings, especially in wood and shell, the delicacy and symmetry of the work in some cases being unsurpassed in ancient America. The carvings in bone and stone are cruder, but still show a high degree of skill, as does much of the pottery. Objects may be decorated with purely geometric patterns, usually ovals or intricate scroll-like designs, or with effigies representing, in conventional form, men,

animals, and supernatural beings, the latter especially being grotesque to the last degree.

Little of Taino religion or mythology is known, but there is historical evidence that these had reached a considerable stage of development, and that masks, images, and the like were widely used. Doubtless the stone "collars" and three-pointed *zemis* from Porto Rico, and the grotesque images and amulets found on other Taino islands, represent only a small part of their ceremonial equipment, the rest, of perishable materials, having been lost through decay.

THE CIBONEY

FROM historical and archeological evidence, the Ciboney, apparently the earliest inhabitants of Cuba, and probably existing on the neighboring islands as well, subsisted solely on natural products without any knowledge of agriculture. Various fruits were eaten in season, and palm-nuts stored away for times of shortage, while land-crabs and shellfish formed a great part of the everyday diet. Fish and the

flesh of the jutia and other small animals were also eaten; and there is some evidence that the now extinct megalocnus, a huge ground sloth, may have formed part of Ciboney diet in ancient times.

There is no definite knowledge of their weapons, but it is very probable that the bow and arrow were numbered among them. They seem to have made dugout canoes of ruder construction than those of the Taino. They occupied caves and rock-shelters wherever possible, and in such places their remains are frequently found; but also on occasion lived in camps in the open—probably in shelters of the rudest kind. Most of their deposits show no trace of pottery, but they seem to have had a little after contact with the Taino. However this may be, they made bowls of wood with the aid of fire, using gouges made of conch-shell to scrape away the charcoal as the work progressed, and turned conch-shells into serviceable bowls and dippers by pecking out the interior whorls and the core. The stone mortars and pitted hammerstones employed by the Ciboney were

THIRD FLOOR	15
similar to those found throughout eastern North America, but their work in flint was very crude, consisting mainly of flake knives and rough scrapers. Axes or celts of stone and shell occur, but are rare and differ in form from Taino types. We know nothing of their dress, or lack of it; their ornaments were disc beads fashioned of shell or of fish vertebrae, and pendants made from waterworn bits of shell or stone, and of sharks' teeth, perforated for suspension. The only specimen known that may possibly illustrate the decorative art of the Ciboney is a carved wooden baton found in the mud of the bottom of a lake in western Cuba. The design consists entirely of dots and incised intersecting straight lines, and although neatly made, cannot be compared with the products of Taino art. It may have been used in ceremonies. Nothing else relating to their ceremonial or religious life has apparently survived, unless the Ciboney may have been responsible for the exceedingly rude faces pecked on stalagmites in certain Cuban caves.	
AND MONOGRAPHS	

16	GUIDE
	THE CARIB As before stated, the Carib culture has not yet been fully worked out and defined, but we can be fairly certain that in general features (excepting always their piratical raids and their cannibalism, both characteristically Carib) their mode of life, dwellings, hammock-beds, use of cassava, and the like, were quite similar to those of the Taino. The Carib were expert bowmen, however, which can not be said of the Taino, and the archeologist observes that they were much more given to painting their pottery than were the Taino, especially in red, black, and white; that the forms were somewhat different, and that the effigies used as handles and decorations for the earthenware vessels have a fat, bloated look not seen in Taino ware. The Carib, moreover, preferred celts of ordinary type, or notched or grooved stone axes, or axes of fanciful form, to the petaloid celt-axe characteristic of the Taino; in fact, when petaloid celts are found on Carib islands they are probably either relics of the orig-
	INDIAN NOTES

THIRD FLOOR	17
inal Arawak occupancy or were brought home as trophies by Carib raiders from Taino territory. Carved wooden stools, idols of stone or wood, carved wooden platters, and stone collars, all familiar Taino artifacts, do not seem to have been made by the Carib, and are seldom seen in the Lesser Antilles, although the three-pointed <i>zemis</i> may have been occasionally imitated by them. It is also noticeable that beads, amulets, or personal ornaments of any kind, so abundant in Cuba, for example, are rare in Carib territory, and when they do occur are usually different in form—perhaps this people made such things mainly of perishable materials. ETHNOLOGY OF THE WEST INDIES (Case 316 A) OWING to their enslavement and virtual extermination by the Spaniards shortly after the Discovery, but few persons showing Indian blood to a marked degree are left in the West Indies; yet some linger in	
AND MONOGRAPHS	

18	GUIDE
	Cuba, mostly in the eastern part, and in a few of the other islands. Most of the collection exhibited was obtained from Yara village near Baracoa, Cuba, and from scattered families in the Maisi district, survivors of the Taino. Many of the articles shown are also used by the neighboring country people of Spanish extraction, but all seem to be of aboriginal origin. Some, however, show modification due to Spanish influence. Especial attention is called to the cassava grater, made by driving bits of hard stone into a wooden tablet. On the lower shelf may be seen a few articles made by the surviving Carib of St. Vincent and Trinidad, and on the top of Case 329 a raft or catamaran of native type from the former island. ARCHEOLOGY OF THE WEST INDIES CUBA (Cases 316 B C, 317 A-C) IN Cuba exploration by expeditions from this Museum thus far has revealed two principal cultures: (1) that of the primitive
	INDIAN NOTES

T INDIES

THIRD FLOOR	19
cave-dwelling Ciboney who were apparently the earliest inhabitants and lived in early times from one end of the island to the other; (2) that of the more advanced Taino who were long established only in the eastern end of the island, although just before the conquest they had overrun most of it. Thus it happens that although crude Ciboney specimens may be found in almost any part of Cuba, the remains of the Taino may be encountered in quantity only in the eastern portion. Most of our Ciboney specimens were found buried in the floors of the caves where these people once lived, although some were discovered in the refuse-heaps marking their camp-sites. On the other hand, most of the Taino material in the Museum was exhumed from village-sites, and only occasional specimens—usually fine objects hidden for safekeeping—were found in caves. Two full case panels and parts of two more are devoted to one of the most characteristic products of the Taino—their pottery. The range of form and design	
AND MONOGRAPHS	

20	GUIDE
	used by the Cuban bands are well illustrated, especially the almost endless variety of grotesque heads and figures used as handles for the vessels. Equally characteristic of the Taino are the beautiful petaloid celts, of which a representative series is displayed, beside celts of forms which might have originated anywhere, and various forms of hammerstones, pestles, and other stone implements. The making of celts is illustrated by a series showing them in all stages of manufacture, together with the hammerstones used to batter and grind them into shape. The use of such celts as axes (hafted like the specimen from North Caicos, Case 319 B) is illustrated by a cut stick forming part of a rack in a burial cave. Also of stone are various fetishes, amulets, and beads, some of them beautifully made, and a few pitted stones, mortars, cassava griddles, weights, and the like. Another characteristic Taino art is illustrated by specimens of wood-carving, including a paddle, part of an effigy representing a cayman or crocodile, and a beautifully carved platter, all found hidden
	INDIAN NOTES

THIRD FLOOR	21
in caves for safekeeping. The last two of these have evidently been inlaid at some time with mother-of-pearl. The shell carving of the Taino was often excellent, as may be seen by the amulets and ornaments in the exhibit, while a series of tools and unfinished objects show how the work was done. Objects of bone are not so abundant, but in the collection exhibited some of the pieces (especially the part of a bone platter and the fragments of spoons and swallow-sticks) exhibit considerable skill. The coming of the Spaniards and the beginning of the written historical period in general are illustrated by two specimens only—a rusty iron spear-head and a crumpled piece of sheet-copper. The shell vessels, shell gouges, mortars, and pitted hammerstones, characteristic of the primitive Ciboney from both ends of the island, may be seen in the last panel, together with their beads and simple ornaments, their rude flints, and a few examples of their woodwork. Of the last, the baton with a carved handle is especially worthy	
AND MONOGRAPHS	

22	GUIDE
	of notice, as perhaps the only surviving example of Ciboney decorative art. This, with several other wooden objects, was found in the muck in the bottom of a lake in Pinar del Rio. A small number of potsherds exhibited in this section, found in a few Ciboney caves, may indicate that in later days the primitive Ciboney people acquired some knowledge of the potter's art, perhaps from the invading Taino. Of unknown origin are the crude faces and figures on exhibition found carved on stalagmites in certain caves. They were probably used ceremonially, but whether the Ciboney or the Taino made them is impossible to say, although their rudeness would suggest the former. JAMAICA (Case 319 A-D) THE upper two shelves of Case 319 and the space under it are devoted to a collection from Jamaica, all of which, except perhaps several large stone mortars, and the three-legged grinding stone or seat,
	INDIAN NOTES

THIRD FLOOR

23

seems to be easily identified as Taino. This seat may have been imported from the mainland; the mortars are of unusually large size, but they resemble some Cuban Ciboney mortars in form.

An examination of the pottery reveals the fact that it bears a strong similarity to Cuban Taino ware, although somewhat simpler and cruder, on the whole, in form and design; the hatchets and ornaments are clearly similar to corresponding objects in Cuba.

Perhaps the slight inferiority noticeable in Jamaican Taino remains, as compared with those of the other islands, may be due to the fact that Jamaica is somewhat isolated, and was not in continual touch with the specialized development of Taino culture in Cuba, Haiti (Santo Domingo), Porto Rico, and the Bahamas.

The explorations by the Museum expedition to this island have been described in a publication "Certain Kitchen-middens in Jamaica."

AND MONOGRAPHS

24	GUIDE
	BAHAMAS (Case 319 A B) A GLANCE at the collection from the various islands of the great Bahama group lying north of Cuba, the names of which may be found on the accompanying map, shows that their culture was indistinguishable from that of the Cuban Taino. Here we have the typical Taino petaloid celts, decoration on pottery, and amulets, some of the latter better than any we have from Cuba, and an excellent series of typical wooden seats, or <i>duhos</i>, two of them adorned with heads and one with intricate carvings like those of the Cuban wooden platter. Best of all is a fine petaloid celt with its wooden handle still intact, found in a cave on North Caicos island. That this was a usual method of hafting these stone axes may be seen from a monolithic hatchet from Grand Caicos carved from a single piece of stone to represent a petaloid stone celt in a similar wooden handle. A similar but ruder one was found in Providenciales. Suggesting the presence of the Ciboney in the Bahamas are several shell gouges;
	INDIAN NOTES

THIRD FLOOR	25
and perhaps further investigation will establish the fact of their presence in these islands before the coming of the Taino. The existence of a third and as yet unknown culture is suggested by the finding, in the Caicos group, of some extraordinary shell-tempered potsherds, highly decorated with incised straight lines and angles, unlike anything found elsewhere in the West Indies. SANTO DOMINGO (Cases 318 A-D, 321 A) THE island of Santo Domingo, anciently called Haiti, and now occupied by the republics of Santo Domingo and Haiti, although only partially explored, has yielded a large collection consisting, for the greater part, of pottery and stonework, both to a large degree obviously of Taino origin and similar to the specimens found in Cuba and the Bahamas. Some of the pottery is better made than the average Cuban ware, and there is an even greater variety in form, yet the resemblance is very strong indeed. Special	
AND MONOGRAPHS	

26	GUIDE
	attention is called to the heart-shape water-bottles, a type not seen in Cuba at all, and the hollow human figures of earthenware, perhaps used as idols, of which only fragments were found in Cuba. Stamps for applying paint, made of earthenware, and in one case of stone, are abundant on this island. In stonework we have the little figurines or amulets, the beads, the pestles, and the petaloid celts characteristic of the Taino culture in Cuba, but in addition we find <i>zemis</i>, or "three-pointed fetishes," in the form of the human breast, which are thought to represent the God of Food or of Fertility; and the curious massive objects of stone, shaped like horse-collars, also thought to be fetishes. These last two classes of objects are especially characteristic of the Taino bands of Porto Rico. Other noteworthy specimens in stone are a unique dagger or club, a carving representing a monkey, once apparently attached to a staff or handle of wood, a large flint implement, and two T-shape stones of unknown use.
	INDIAN NOTES

THIRD FLOOR	27
Exhibited also are a few objects of shell and bone suggesting those of Cuba, and a small but interesting wooden idol, all typically Taino. Carib culture is represented in the collection from this island only by a few axe-heads and perhaps the T-shape stones, and the Ciboney not at all; but further exploration will probably supply specimens of both, especially the latter. The results of two expeditions to this island have been published by the Museum. PORTO RICO (Cases 321 B, 322 A) IN the Porto Rico exhibit we see the massive stone collars and the mammiform <i>zemis</i>, before mentioned, as being the most characteristic of Taino products for this island, although found occasionally in Santo Domingo, and, rarely, in the Lesser Antilles. As before stated, the <i>zemis</i>, or three-pointed stones, most of them made in the form of the human breast, probably represent the God of Food or of Fertility, or	
AND MONOGRAPHS	

28	GUIDE
	maybe Mother Earth from whom the tribes of men draw their food as the infant does from its mother's breast. They seem to have been considered powerful in producing large crops of yuca or cassava. It is thought that the curious objects of stone resembling horse-collars, like the three-pointed stones, were <i>zemis</i> or fetishes used in tree-worship, and that the earliest forms were of wood, made by bending a root or a pole into the form of an oval hoop and fastening the ends together. A more highly developed form was apparently compound, combining a wooden hoop with a so-called "elbow-stone," of which we exhibit some specimens, while the final stage was the collar, made entirely of stone, but still showing in many cases an attempt to represent characteristics of the wooden original. Much of the pottery is thoroughly Taino in character and might have come from Santo Domingo or Cuba, but Carib influence is seen in the red-painted ware and in the forms of some of the grotesque heads used as handles for vessels.
	INDIAN NOTES

Most of the stone axes in the collection from this island are either typical Taino petaloid celts or celts of more widely distributed forms; the stone beads and the like resemble those of Cuba. Especially worthy of note is the *duho*, or wooden seat, the back of which is higher than usual, and a tiny *duho* of stone made to represent the wooden type.

No trace of the Ciboney culture is seen in the collection, unless the few rude celt-like implements of shell may be attributed to them.

VIRGIN ISLANDS

(Cases 322 B, 324 B)

THE Virgin Islands, including St Thomas, St Croix, St John, and Tortola, recently acquired by the United States, have yielded to a Museum expedition a collection illustrating both the Arawak and the Carib cultures, the former doubtless representing the earlier occupancy, as the Carib seem to have been in full possession at the time of the Discovery. The rather crude character of the Arawak pottery

would indicate this, too—it seems to represent a period before the Taino culture had attained the height of its development. Much of the pottery found on these islands is so plain, however, that it lacks distinguishing features serving to determine its origin. The distinctly Carib ware is recognizable as usual by its decoration in red or in red and white, and by the form of the grotesque heads. Especially interesting are several massive Carib bowls showing painted decoration on the inside.

One Taino stone collar was collected on St. Croix island, but this was probably a trophy from Porto Rico brought home by Carib raiders; and there are also two small rude mammiform *zemis* of Taino style. The stone axes show both the grooved and the notched forms of the Carib, the fine petaloid celts of the Arawak, and a number whose origin is doubtful.

There are several objects of bone in the collection also—one of them the handle, carved in the form of a man, of some implement, probably a “swallow-stick,” such as was thrust down the throat in certain

ceremonies. This has inlaid shell eyes and mouth, and is an excellent specimen of Taino art.

The Ciboney are not represented in the collection, unless it may be that they made the shell celts displayed. It will take further exploration and study to determine whether this was the case, or whether the implements in question were the work of the Arawak or the Carib. It seems probable, however, in view of their increase in number as we pass down through the islands, that they are of Carib origin.

Further information may be found in "Archeology of the Virgin Islands," published by this Museum.

OTHER ISLANDS

(Case 324 A B)

FROM Anguilla and St Eustatius the collection is small and has little character. From St. Kitts and Nevis most of the axes and pestles have a Carib appearance. Montserrat yields Carib stone implements, and decidedly Carib polychrome pottery, with one tiny three-pointed *zemi* of Arawak

32	GUIDE
	origin, or showing the influence of that people. On the other hand, we see two decidedly Arawak petaloid celts in the Antigua collection, and the four objects from St Martin include one fine Taino <i>zemi</i>. GUADALOUPE AND DOMINICA (Case 324A) THE larger collection from Guadaloupe, mainly stone axes, consists on the whole of distinctly Carib types; and here we first note the ornate forms of stone axe-heads so highly developed farther south; and the same may be said of the Dominica collection. In this the only object suggesting the possibility of Arawak origin is a solitary three-pointed <i>zemi</i>, and this may be merely a Carib imitation. MARTINIQUE (Case 324B) THE small collection from this island shows the Arawak petaloid celt and the Carib grooved or notched axe side by side.
	INDIAN NOTES

THIRD FLOOR	33
SANTA LUCIA (Case 325 B) FROM Santa Lucia the collection consists mainly of stone axes, and ornate stone forms of unknown use. These are mainly pure Carib in type, except a few fine petaloid celts which might have, and probably did, come from Santo Domingo or Cuba, captured by Carib raiders. ST VINCENT (Cases 325 A B, 326, 327 A-D) BUT it is not until we reach St Vincent that the remains of Carib culture at its highest stage of development are found. Here we find the typical massive though usually well-made pottery, the bloated appearance of the grotesque heads used as handles for the vessels, the extensive use of red, white, and black paint in decorating—in fact, all the distinguishing characteristics of Carib ware. The stone implements, mainly axes, are equally typical of Carib culture, for the greater part notched or grooved, and some	
AND MONOGRAPHS	

of them ornamented with decorative protuberances of varying forms. One especially ornate specimen, doubtless intended for ceremonial use, shows a carved open-work decoration on the poll, and others, effective designs on the blades. A handsome decorated dish of stone also figures in the collection.

There are also a number of crescent-shape, hook-like, and fanciful forms of stone to which no practical use can be assigned, although they are made of material hard enough to stand service as implements. Also exhibited is one entire case (326) filled with fanciful forms in stone too soft to have been of practical service for any purpose. Some of these represent the well-known axe-forms of the island, some the stone dishes, while others are entirely fanciful. They were found for the greater part in a single locality, and, it is thought, formed part of a ceremonial deposit of some sort.

Before leaving the subject of stone objects, attention is called to the large mortars and grinding slabs, and the huge axe-heads too large for practical use, all exhibited

beneath Case 327; also to the beads and amulets of stone which in most cases differ markedly from those of the Taino.

The only objects suggesting Taino styles in the collection are a few fine petaloid celts, perhaps brought home as war trophies, and some small three pointed *zemis*, probably imitations of Taino forms.

GRENADINES

(Case 328 A-D)

THE collection from the Grenadine islands including Baliceaux, Cannouan, Mustique, Bequia, Carriacou, Union I., and Little Martinique, shows practically the same culture as St Vincent, for the greater part typically Carib, with the exception of two three-pointed *zemis* of Taino type, and a few petaloid celts.

The island of Cannouan, however, has yielded some exceedingly rude axe-like implements that suggest the presence of another and very primitive culture which should be further investigated.

Special attention is called to the curiously grotesque water-bottle of pottery from the

island of Carriacou. Shell celts seem quite numerous in these islands, but their origin is as yet uncertain.

GRENADA

(Case 329 A B)

IN Grenada the Carib culture is found still in its most exuberant form, with axes and pottery, exactly as in St Vincent, and here too are found abundant shell celts and occasional highly polished Taino petaloids. As in Cannouan, there are a few exceedingly crude axe-like implements suggesting a former primitive culture.

Another noticeable feature is the presence of several true adze-blades of stone with one flat and one convex side, an implement seen only occasionally on other Carib islands and not at all in the Taino district.

TRINIDAD

(Case 330 A B)

IN Trinidad, the last of the chain of islands and nearest the South American coast, we still find Carib pottery at its

highest point of development, but our collection contains fewer of the typical Carib axes, and a new form, but rarely seen in the other Carib islands, appears here—an axe with two sharply cut notches near the poll—a type characteristic of Venezuela and the Guianas. Attention is called to the excellent series of complete or nearly complete Carib pottery vessels, especially a unique bird-shape water-bottle.

The results of two expeditions to this island have been published by the Museum.

TOBAGO

(Case 329 C)

ONE would expect the island of Tobago, lying fairly near to Trinidad, to yield a full series of Carib artifacts, but such is not the case. The collection, on the contrary, comprises a large number of celts, including the petaloid, with very few axes recognizable as Carib, and no pottery at all, while a plummet-like stone implement, not seen elsewhere in the islands, appears.

38	GUIDE
	BARBADOS (Case 329 C) THE outlying island of Barbados, lying considerably to the eastward of the main archipelago of the Lesser Antilles, has yielded an unusually large collection of shell celts and gouges, some crude pottery, most of which is Carib, but a few pieces of which appear to be Arawak, a typical Carib "hookstone," three Carib axes, and four celts, all of which last might be, as one certainly is, of Arawak origin. It is probable, therefore, that both Carib and Arawak occupied the island at different periods, but to solve this and other West Indian archeological problems, a great deal of further exploration and study will be needed.
